Executive Summary

Medicare beneficiaries could save hundreds or even thousands of dollars each year by taking less expensive – primarily generic – medicines that have been shown to be as effective and safe as more expensive brand-name products. This strategy has the potential to keep millions of seniors every year out of the Part D coverage gap known as the “doughnut hole.” In 2009, the doughnut hole begins when drug expenses reach \$2,700, and continues until beneficiaries have spent \$4,350 out of their own pockets.

This report shows that decisions beneficiaries make about their drugs, combined with their choice of a Part D drug plan, have a substantial impact on their out-of-pocket prescription drug costs. The analysis focuses on drugs used to treat five common conditions: high cholesterol, high blood pressure, heart attack, osteoarthritis, and diabetes. Tens of millions of Medicare beneficiaries take drugs to treat one or more of these conditions. We evaluated the potential savings for people who take multiple medicines to treat these conditions – as an illustration of the savings available to people taking multiple medicines for multiple chronic diseases (a not uncommon phenomena for people over age 65). In addition, we evaluated potential savings for people taking only one medicine regularly for a single one of the conditions listed above.

The analysis is based on cost estimates from Medicare’s “Plan Finder” tool (www.medicare.gov). This tool is designed to help Medicare beneficiaries and their families determine their expected annual drug costs (including premiums, deductibles, and cost-sharing) based on drugs that have been prescribed for them. We selected five drugs commonly prescribed to treat the conditions listed above, and entered them into the tool for six zip codes around the country. Then we selected five lower cost drugs shown to be equally safe and effective for each condition and entered them into the Plan Finder. The lower cost drugs were selected from the evaluations conducted by the *Consumer Reports Best Buy Drugs* project. (See page v.)

Next, we identified for each set of drugs in each zip code the lowest cost plan, the highest cost plan, and the average cost plan. We used the Plan Finder for a second set of estimates, assuming a person was taking only one drug--a brand-name or a *Best Buy*.

The results of this analysis have direct relevance for seniors during Part D’s annual open enrollment season (November 15 to December 31) for the 2009 coverage year. But they also illustrate the substantial savings achievable at any time from switching to lower-cost medicines that are equally as effective and safe.

Key findings:

- ***Medicare beneficiaries can dramatically improve the value of their prescription drug dollars by talking with their doctors about switching to lower cost medicines.*** Based on a comparison of drugs used to treat all five conditions (high cholesterol, high blood pressure, post-heart attack care, arthritis pain, and diabetes), seniors switching to lower cost medicines could save between \$4,200 to just under \$6,000 a

year. For example, in Sacramento, California, savings for people taking five medicines were \$4,314 in the lowest cost plans, \$5,705 in the highest cost plans, and \$5,564 in the average cost plans.

- ***Switching to lower cost drugs can delay or eliminate altogether the much-feared gap in benefits known as the “doughnut hole.”*** For people taking the five sample low cost drugs, almost all would be spared falling into the doughnut hole in 2009 even if they enrolled in the high cost plan in their area. On average, in the highest cost plan, their out of pocket drugs costs would be around \$1,900, \$800 below the “doughnut hole” point.
- ***Large potential savings are even available to consumers who are taking only one medicine.*** Switching from a high-priced drug to a lower-priced drug saved between \$246 and \$1,960 per year on average for consumer taking one chronic disease medicine.

In a related analysis, we calculated the potential savings from switching to a lower-cost *Best Buy* drug for people who are uninsured and pay the full cost for their medicines. In a comparison of costs between high priced brand-name medicines and Best Buy alternatives on the Web site drugstore.com, we found potential annual savings ranging from \$612 to \$2,580 associated with taking just one medicine.

Millions of Americans have been hit hard by the recession and recent financial crisis. Many have lost insurance coverage. Our findings provide strong evidence that prescription drug expenses are one area where people can look for substantial savings.

About This Report and the *Best Buy Drugs* Project

This report was prepared by Maria Botello, Ed.D., Evaluation Director, and Gail Shearer, Director, of *Consumer Reports Best Buy Drugs*, with assistance from Steven Findlay, Managing Editor; Kelly Ernst, Research Assistant; and Marilyn Larkin, Contributing Editor. *Consumer Reports Best Buy Drugs* is a public information and education project of Consumers Union, the non-profit publisher of *Consumer Reports* magazine. The project is on the Web at ConsumerReportsHealth.org/BestBuyDrugs.

Consumer Reports Best Buy Drugs Web provides information for consumers about the comparative effectiveness, safety, and cost of prescription drugs. It has evaluated most of the major types of medicines used to treat the most prevalent medical conditions and diseases. Those include high blood pressure, heart disease, high cholesterol, depression, diabetes, asthma, pain, heartburn, and allergies.

The findings in the *Best Buy* drugs reports are based primarily on comprehensive and independent reviews of the scientific literature and evidence on the effectiveness and safety of drugs in specific classes. The reviews were conducted by teams of physicians and researchers under the auspices of the Drug Effectiveness Review Project, or DERP, which is based at the Oregon Health & Science University Evidence-based Practice Center (EPC) in Portland, Oregon. For more information about DERP, go to ohsu.edu/ohsuedu/research/policycenter/DERP/index.cfm.

Consumer Reports Best Buy Drugs is partially grant funded. Its present operating grant comes from the State Attorney General Consumer and Prescriber Education Grant Program. This program is funded by the multi-state settlement of consumer fraud claims regarding the marketing of the prescription drug Neurontin. Initial funding for *Consumer Reports Best Buy Drugs* came from the Engelberg Foundation, a charitable trust, and the National Library of Medicine, part of the National Institutes of Health.

INTRODUCTION

Medicare beneficiaries are now deciding which, if any, Medicare prescription drug plan is best for them. The decision is complicated because the drug benefit is offered by more than 2,000 private plans.¹ The purpose of this report is to increase awareness of the large potential savings available to individuals with Medicare Part D coverage who switch to a doctor-approved alternative to their current medication.

This report is not intended to help beneficiaries select a plan. More information and tips on choosing a plan are available at medicarerights.org and medicare.gov.

METHODS

To calculate savings for Medicare beneficiaries, we:

1. Identified one zip code in one major city in each of six states.
2. Selected five common therapeutic categories with available *Consumer Reports Best Buy Drugs* reports.
3. Identified a *Best Buy* drug and brand-name drug for each therapeutic category, based on the analyses in various *Best Buy Drugs* reports.
4. Used the medicare.gov Plan Finder to estimate annual costs for a consumer who needs all five drugs.
5. Used the medicare.gov Plan Finder to estimate annual costs for a consumer who needs one of the five drugs.
6. Used drugstore.com to estimate savings that uninsured consumers could realize from switching to *Best Buy* drugs.

Step one: We selected the following states for the analysis: Arizona, California, Georgia, Maryland, Minnesota, and Pennsylvania. These states represent both geographic variation and diversity. The number of plans offered within each state varied from 41 (Minnesota) to 52 (Pennsylvania). We chose the following zip codes:

Arizona	85021 (Phoenix)
California:	95819 (Sacramento)
Georgia:	30303 (Atlanta)
Maryland	21263 (Baltimore)
Minnesota	55414 (Minneapolis)
Pennsylvania	17111 (Harrisburg)

¹ Kaiser Family Foundation, Medicare Part D Plan Characteristics, October 2007. Available at <http://www.kff.org/medicare/rxdrugbenefit.cfm>.

Step two. We selected the following drug categories:

<u>Category</u>	<u>Condition</u>
Statins	High cholesterol
Calcium channel blockers	High blood pressure
ACE (angiotensin-converting enzyme) inhibitors	Post-heart attack care
NSAIDs (non-steroidal anti-inflammatory drugs)	Arthritis pain
Oral diabetes drugs	Type 2 diabetes

Step three: We identified a *Best Buy* drug and an equivalent brand-name drug that is often prescribed instead of the *Best Buy* drug. Table 1 presents the drugs chosen for comparison.

Table 1: Drugs Chosen for the Comparison

Condition	Drug Category	<i>Best Buy</i> Drug	Brand-Name Drug
For cholesterol reduction of less than 30 %	Statins	Lovastatin 20mg (30 per month)	Lipitor 20mg (30 per month)
High blood pressure	Calcium channel blocker*	Diltiazem SR 120mg capsule (30 per month)	Procardia XL 60mg (30 per month)
After heart attack	ACE inhibitor	Lisinopril 20mg (30 per month)	Altace 2.5mg (30 per month)
Arthritis pain	NSAID	Ibuprofen 400mg 3 x day (90 per month)	Celebrex 200mg 2 x day (60 per month)
Type 2 diabetes	Oral diabetes drug	Metformin 1000mg 2 per day (60 per month)	Januvia 50mg (30 per month)

*Would likely be prescribed along with another type of blood pressure medicine--for example, a diuretic

Step four: We used the Medicare Plan Finder tool at www.medicare.gov to find the total annual cost in each of six zip codes for the *Best Buy* and the brand-name drugs in October 2008. Since prices and drug coverage can change, different results might be obtained if this analysis were repeated. We did not specify a pharmacy preference. The analyses were prepared for stand-alone prescription drug plans, not Medicare Advantage plans, which provide health care and prescription drug coverage through private health maintenance organizations.

Step five: We used the Plan Finder tool to determine the total annual costs for single drugs, comparing one *Best Buy* drug and one brand-name drug in each of the six zip codes, using the same approach as in Step four.

Step six: Because uninsured consumers and Medicare beneficiaries without Part D coverage pay full out-of-pocket costs for their medicines, we looked up prices for the brand-name drugs and *Best Buys* on drugstore.com, then calculated the monthly and annual savings from switching to *Best Buy* drugs.

FINDINGS

We summarize in Table 2 the estimated total annual costs in the six selected zip codes for the two sets of drugs listed in Table 1. Total annual costs include premiums, deductibles, cost-sharing (e.g., \$25 co-payments) and costs of drugs not covered by the formulary. The findings for California (95819) were:

- A Medicare beneficiary in Sacramento would save \$4,314 a year by switching to all five lower-cost drugs and enrolling in the lowest cost plan available in California.
- For an average cost plan, the annual savings would be \$5,564.
- For the highest cost drug plan, the savings would be \$5,705.

The table reports similar savings for Arizona, Georgia, Maryland, Minnesota, and Pennsylvania.

In all six states, the Medicare beneficiary who switched to all five lower cost (*Best Buy*) drugs could avoid falling into the doughnut hole (coverage gap), regardless of which Medicare Part D plan he or she selected. The coverage gap in most plans begins when total drug costs equal \$2,700. In all states, the person taking the package of *Best Buy* drugs *would never reach this total in annual drug costs*. In contrast, a Medicare beneficiary who continued to take the five more expensive brand-name drugs would experience at least some period in the doughnut hole, unless they chose a relatively high premium plan that included some coverage of the doughnut hole.

There are several reasons that total annual out-of-pocket costs are considerably lower for *Best Buy* drugs. First, the prices of these drugs are lower. Second, in many cases, the prescription drug plan formularies do not include the more expensive drugs, so a person who decides to stay with a brand-name drug will pay even more for it because it is “off formulary.” Sometimes the more expensive drugs are included in the formulary, but in a higher tier that has higher copayments.

In addition, prescription drug plans may place the higher priced drug in a higher cost-sharing tier than other drugs. The combination of higher prices, higher cost-sharing, and lack of inclusion in the formulary combine to make the total costs higher for the brand-name drug set. The package of five drugs in the analysis above gives an indication of potential savings for someone who takes multiple drugs. The package was *not* selected with the intention of showing a typical

person’s spending, though it is possible that many people do, in fact, take this combination of drugs.

**Table 2: Total Annual Drug Costs for Six Zip Codes:
Comparing Costs for Package of Five
Consumer Reports Best Buy Drugs versus Brand-Name Drugs**

Phoenix, Arizona 85021	<i>Best Buy Drugs</i>	Brand-name Drugs	Potential Savings (Annual)
	<i>Total Annual Cost</i>		
Lowest cost plan*	\$526	\$4,784	\$4,258

	<i>Total Annual Cost</i>		
Lowest cost plan*	\$541	\$4,823	\$4,282
Average cost plan	\$930	\$6,527	\$5,597
Highest cost plan**	\$1,640	\$7,600	\$5,960

Table 2. (Continued)

Harrisburg, Pennsylvania 17111	Best Buy Drugs	Brand-name Drugs	Potential Savings (Annual)
	<i>Total Annual Cost</i>		
Lowest cost plan*	\$523	\$4,787	\$4,264
Average cost plan	\$945	\$6,307	\$5,362
Highest cost plan**	\$1,597	\$7,552	\$5,955
AVERAGE FOR 6 ZIP CODES			
	Best Buy Drugs	Brand-name Drugs	Potential Savings (Annual)
<i>Total Annual Cost</i>			
Lowest cost plan*	\$547	\$4,815	\$4,268
Average cost plan	\$929	\$6,461	\$5,532
Highest cost plan**	\$1,691	\$7,600	\$5,910

*The lowest cost plan is the Medicare Part D plan that has the lowest total annual costs for the given set of drugs. Total annual costs include the monthly premiums, deductibles, cost-sharing, and costs of drugs not covered by the formulary.

**The highest cost plan is the Medicare Part D plan that has the highest total annual cost for the given set of drugs. Again, total annual costs include the monthly premiums, deductible, cost-sharing, and costs of drugs not covered by the formulary.

Single Drug Savings

We calculated savings for people taking just one drug, as well. We ran a comparison of total annual costs in each of the six zip codes for one of the therapeutic categories, comparing the total annual costs for a person using one *Best Buy* drug to the cost of taking the brand-name drug.

Table 3 summarizes our findings. Savings from switching from a relatively high-priced drugs to a *Best Buy* drug ranged from \$227 to \$1,672, depending on the drug category, zip code, and whether the plan was low cost or high cost. The average potential savings for each of the six drugs, at the average cost plan, was \$845. In many cases, these savings are sufficient to cover the cost of the Medicare Part D premium. Monthly premiums for stand-alone prescription drug plans in the selected states range from \$11.50 to \$129.30, as summarized in Table 4.

**Table 3: Total Annual Drug Costs for Individual Drugs:
Comparing Consumer Reports Best Buy Drugs
And Brand-Name Drug**

Highest cost plan**	\$1,356	\$2,057	\$701
Average, Six Zip codes	<i>Best Buy Drug</i> (5 drugs)	<i>Brand-name Drug</i> (5 drugs)	Potential Savings (Annual)
	<i>Total Annual Cost</i>		
Lowest cost plan*	\$302	\$770	\$468
Average cost plan	\$638	\$1,484	\$845
Highest cost plan**	\$1,405	\$2,354	\$950

*The lowest cost plan is the Medicare Part D plan that has the lowest total annual costs for the given set of drugs. Total annual costs include monthly premiums, deductibles, cost-sharing, and costs of drugs not covered by the formulary.

**The highest cost plan is the Medicare Part D plan that has the highest total annual cost for the given set of drugs. Again, total annual costs include the monthly premiums, deductible, cost-sharing, and costs of drugs not covered by the formulary.

**Table 4: Monthly Premiums for Prescription Drug Plans
in Six States**

State	Low Premium	High Premium
Arizona	\$11.50	\$102.20
California	\$18.30	\$129.30
Georgia	\$16.10	\$103.40
Maryland	\$18.40	\$111.80
Minnesota	\$15.20	\$106.70
Pennsylvania	\$13.70	\$108.00

**Potential Savings for Uninsured Consumers
and Medicare Beneficiaries Who Do Not Enroll in a Medicare Part D Plan**

To calculate the potential savings from switching to a *Consumer Reports Best Buy* drug without enrolling in a Medicare Part D plan, we looked up the retail prices for these drugs at drugstore.com. Table 5 summarizes our findings. The potential annual savings accrued merely by switching from the high priced drug to the *Best Buy* drug range from \$612 to \$2,580. An individual who switched from the brand-name to the *Best Buy* drugs in all five categories would save close to \$6,800 in a year.

Table 5: Potential Savings from Switching to *Consumer Reports Best Buy* Drugs for Uninsured Consumers and Beneficiaries without Medicare Part D Coverage

<i>Best Buy</i> Drugs	Monthly cost ²	Brand-name Drugs	Monthly Cost	Potential Monthly Savings	Potential Annual Savings
Lovastatin 20mg (30 tablets)	\$23	Lipitor 20mg (30 tablets)	\$120	\$97	\$1,164
Lisinopril 20mg (30 tablets)	\$14	Altace 2.5mg (30 capsules)	\$65	\$51	\$612
Ibuprofen 400mg 3 x day (90 tablets)	\$21	Celebrex 200 mg 2 x day (60 capsules)	\$236	\$215	\$2,580
Metformin 1000mg 2 x day (60 tablets)	\$32	Januvia 50mg (30 tablets)	\$166	\$134	\$1,608
Diltiazem HCL CR 120mg, 1 x day ³	\$36	Procardia XL 60mg, 1 x day	\$105	\$69	\$828
TOTAL					\$6,792

² These prices were retrieved from www.drugstore.com on October 15, 2008. Some adjustments were made to get a comparable number of pills per prescription on the drugstore.com website. For example, Celebrex came in 30 capsule packages, so to take two a day, it was assumed that two prescriptions of 30 each were purchased. Diltiazem 120mg is not specifically listed as SR (sustained release); we assume the Diltiazem HCl CR 120mg is the same as the form listed at Medicare.gov. Procardia XL 60mg was not available at Drugstore.com, so it is assumed that two 30mg pills would be taken. The Januvia (50mg) price was retrieved from destinationrx.com on October 16, 2008.

³ Diltiazem SR 120mg, the drug form used for the Medicare PDP analyses, is not available in this form from drugstore.com. For this table, we used a substitute form, Diltiazem HCL CR, 120mg 12-hours (30 capsules), and it would be taken once a day. (The SR version was available at a 60mg level, with 24-hour coverage). Note: medicare.gov lists the drug as: Diltiazem HCL SR CAP 24 HR.

CONCLUSION

This analysis demonstrates that Medicare beneficiaries and younger consumers who want to get better value for their prescription dollars should talk with their doctors and pharmacists about switching from high-priced drugs to *Best Buy* drugs that have been shown to be equally effective and safe, yet are far more affordable. *Consumer Reports Best Buy Drugs* currently provides information on 20 categories of drugs, and more will be added in coming months.

Attachment:

The tables on the following pages show the total annual costs for *Best Buy* drugs and brand-name drugs sets in selected zip codes for Arizona, California, Georgia, Maryland, Minnesota, and Pennsylvania
