This spreadsheet displays hospitals that had a significantly higher standardized infection ratio (SIR) in at least one of five healthcare-associated infection (HAI) types in 2013, 2014 and 2015. The spreadsheet was created by Consumers Union using information provided by the CA Department of Public Health (CDPH) on the CHHS Open Data Portal (https://chhs.data.ca.gov/browse?q=hospital+infection) and from an August 2016 CDPH response to a Public Records Act request.

[1]For SSI, the number of operative procedures with high SIRs are included in parentheses.

[2]Hospitals with this asterisk (*) were "secondary" to another "primary" facility in 2013 but in subsequent years they disappear entirely from the HAI data spreadsheets.

[3]LTAC hospitals are classified as long term acute care hospitals for the purposes of reporting infections.

This spreadsheet displays hospitals that had a significantly higher standardized infection ratio (SIR) in at least one of five healthcare-associated infection (HAI) types in 2013, 2014 and 2015. The spreadsheet was created by Consumers Union using information provided by the CA Department of Public Health (CDPH) on the CHHS Open Data Portal (https://chhs.data.ca.gov/browse?q=hospital+infection) and from an August 2016 CDPH response to a Public Records Act request.

[1]For SSI, the number of operative procedures with high SIRs are included in parentheses.

[2]Hospitals with this asterisk (*) were "secondary" to another "primary" facility in 2013 but in subsequent years they disappear entirely from the HAI data spreadsheets.

[3]LTAC hospitals are classified as long term acute care hospitals for the purposes of reporting infections.
