

Office of Governor Steven Sisolak  
State Capitol Building  
101 N. Carson Street  
Carson City, NV 89701

Dear Governor Sisolak,

On behalf of our members, Consumer Reports thanks you for the action you have taken to combat COVID-19 and protect the citizens of Nevada. As your state works towards its economic recovery, we urge you to put consumers first by including smart investments in the next generation of vehicle technologies in your recovery plans. By accelerating a market revolution in transportation, Nevada can save consumers money and stimulate the economy.

Nevadans benefit from and want clean and electric transportation. Consumer Reports' analysis found that Electric Vehicles' (EVs) maintenance and repair costs are *half that of* traditional gas-powered vehicles right now. Further, switching from fueling to charging a new electric vehicle can save Nevada drivers \$1,000-\$1,200 per year in operating costs. And despite the fact that EV choices are limited in the state today, our consumer survey data show that 74% of potential car buyers in Nevada are interested in purchasing an electric vehicle, including 38% for their next vehicle. This shows enthusiasm even before popular crossover, SUV and pickup models begin entering the market as automakers release more EV models starting in 2021.

These vehicles will also be good for the state as a whole. Investing in EVs and their infrastructure will support new jobs. Successes like the Gigafactory, which created over 7,000 jobs, are just the beginning.<sup>i</sup> In fact, according to the National Renewable Energy Laboratory, EV adoption could create as many as 50,000 jobs annually.<sup>ii</sup> And, experts expected the combined impact of federal and state Clean Car Standards to generate 100,000 jobs by 2025, and more than double that in 2035.<sup>iii</sup> With the right policies, Nevada can still be a key beneficiary of this kind of job growth, despite recent federal rollbacks.

The first step toward this potential is to help consumers choose the technology that best fits their needs. Despite the savings over the life of the vehicle, the sticker price of a new electric vehicle and charging infrastructure can prevent consumers from investing in their long-term economic benefit. Cutting consumers a deal with low-cost incentives like commuter lane access, toll exemptions or targeted rebates will accelerate adoption of this new technology and the benefits it will deliver to Nevadans and their economy.

In contrast, Nevada almost impeded new technology by imposing new taxes on consumers, such as a punitive fee on new electric vehicle registration.<sup>iv</sup> Rather than stymie growth, Nevada should reject future EV fees and open the gate to innovation by accelerating the market for electric vehicles.

You can also help stimulate the economy by ensuring Nevadans can easily charge their electric vehicles through incentives for installing charging equipment at home, businesses and retail shops, and in parking garages. These efforts can be supplemented through the combination of building codes that incorporate EV chargers and policies that encourage utilities to invest in charging infrastructure. And where incentives are not possible, fiscally responsible loans for capital-intensive projects can help households across Nevada. The Nevada Clean Energy Fund is a public-private partnership that helps consumers finance energy improvements such as solar panels and charging equipment. And, as the loans are paid back, the partnership becomes a revolving fund, ensuring fiscal sustainability. Expanding this kind of smart, efficient, responsible investing and attracting private capital will help consumers access money-saving upgrades and stimulate economic development.

There are also broader opportunities when it comes to clean, fuel efficient vehicles. Before the rollback of federal fuel economy and pollution standards, consumers in Nevada were set to save an additional \$2.5 billion over the life of their new cars.<sup>v</sup> By starting Nevada on the path to join 14 other states in adopting Low

Emissions Vehicle and Zero Emissions Vehicle standards, you created the opportunity to put that money back in their pockets. This step will expand state leadership on a 21st century auto market that will save consumers money by giving them access to more fuel efficient vehicles and more consumer choice overall.

Finally, we urge you to use your platform as governor to encourage your federal delegation to push for stimulative transportation policies such as consumer incentives, infrastructure spending and expanding domestic manufacturing at the federal level.

From innovative vehicle technology to recharging infrastructure at homes, stores, and workplaces, investments in the future of transportation can deliver new jobs and economic activity, lifting up both consumers and businesses. Your leadership will allow Nevada to seize this opportunity.

Consumer Reports welcomes the chance to discuss these opportunities further, including a virtual presentation to your Economic Recovery team. You can find further information on these policies in the attached fact sheet.

Warm Regards,

Alfred Artis  
Policy Analyst, Sustainability

CC:  
Lt. Governor Kate Marshall  
Senate Majority Leader Nicole Cannizzaro  
Senate Minority Leader James Settlemeyer  
Speaker of the Assembly Jason Frierson  
Assembly Majority Leader Teresa Benitez-Thompson  
Assembly Minority Leader Robin Titus
