Introduction

Why should you follow this playbook?

85%
of consumers

would be more likely to shop from a platform that was rated highly for product safety by an organization like Consumer Reports

Source: Consumer Reports nationally representative American Experiences Survey of 2,191 U.S. adults (October 2025).

The Digital Marketplace Product Safety Playbook is a companion to Consumer Reports' evaluation of digital marketplaces. This playbook outlines key product safety information that must be transmitted to consumers, as well as some crucial elements specific to children's products. It also provides important practices we would like to see platforms adopt and implement to ensure that consumers have all the information they need to make a safe choice for their families. These recommendations are based on Consumer Product Safety Commission (CPSC) guidance, voluntary and mandatory safety standards, and expertise from consumer safety and health organizations such as Consumer Reports and American Academy of Pediatrics (AAP). Consider this our invitation to a deeper conversation about the ways marketplaces can maximize safety efforts. Implementation of these recommendations aligns with our Digital Marketplace Safety Framework and will set the foundation for higher marks in Consumer Reports' marketplace safety evaluations.

dards, and expertise from consumer safety and health organizations such as Consumer Reports and American Academy of Pediatrics (AAP). Consider this our invitation to a deeper conversation about the ways marketplaces can maximize safety efforts. Implementation of these recommendations aligns with our Digital Marketplace Safety Framework and will set the foundation for higher marks in Consumer Reports' marketplace safety evaluations.

Critical Safety Information

Digital platforms should ensure that sellers adhere to their responsibility to sell safe products and encourage the safe use of their products. The goal is to make sure shoppers have access to at least the same or equivalent information available in-store. **To that end, it is critical for digital marketplaces to require sellers to provide certain information to be included on product pages for consumers in order to best mimic an in-store experience.** This includes clear guidelines and tutorials to educate and help their sellers meet the needs of U.S. consumers.

GENERAL GUIDELINES FOR SAFETY INFORMATION

Platforms must ensure that sellers provide required and other pertinent safety information on the product page, including any warnings that would limit how a product can be used and who the intended user is. This includes age grading, supervision requirements, guidelines, or recommendations, as well as potential hazards.

In listing a product on a digital platform, it must be shown being used appropriately and safely. This includes ensuring the photos on the product page depict a safe use environment and give consumers the information they need to purchase the right product and use it safely.

For children's products specifically, it is important to include all required warnings, including the small parts warning. [16 CFR 1500.20\(c\)\(6\) and \(d\)](#) require that the small parts warning (including small balls) that must be visible on the

Example: Unsafe sleep environment with blanket inside the crib.

package on a store shelf must also be visible on the product page when it is for sale, either in a catalog or online.

In addition, the platform should help to ensure that sellers never show the product being used in an unsafe manner, such as without a proper guard if required, or by children in a dangerous environment.

Critical Safety Information

SPECIFIC SAFETY MESSAGING FOR CHILDREN'S PRODUCTS

Safe Infant Sleep: for any infant product that has been designed or listed on the product page for sleep, or has a setting/function that is designed or listed for infant sleep. For more information, go to safeinfantsleep.org, NIH's [Safe to Sleep Campaign](#), or the American Academy of Pediatrics (AAP) at healthychildren.org.

- Follow the **ABCs** of safe sleep whenever you show an infant inside a sleep product:
 - Baby is **Alone** and has their own separate sleep space.
 - ◊ Other products, such as padded crib bumper pads, pillows, blankets, stuffed animals, or toys, should not be in the sleep environment.
 - Baby is placed to sleep on their **Back**.
 - Baby sleeps in a **Crib**, play yard, or bassinet that meets the federal safety standard. Never show a baby sleeping in a product not intended for sleep.
- Crib placement in the room is important. Do not put the crib near cords or heating sources. The baby monitor needs to be outside the crib with the cord covered or at least 3 feet away.

For any product where it is foreseeable that a consumer could use it for infant sleep, the product page must make clear that the product is not for infant sleep and should not include any depictions of unsafe sleep practices. Such products include infant loungers, rockers, swings, and bouncers.

Example: Crib image on product page shows unsafe sleep environment with blanket in the crib.

Example: Crib depicted with no unsafe sleep items or conditions.

Critical Safety Information

SPECIFIC SAFETY MESSAGING FOR CHILDREN'S PRODUCTS

Pacifiers:

- Pacifier listings should include warnings that consumers should check for tears, breakage, or mold before use and that tying the pacifier around a child's neck poses a strangulation hazard.
- Pacifier listings should not show a baby sleeping in an unsafe sleep environment.

Example: It is unsafe for a baby to sleep with a hat.

Example: Baby shown on a sheet (in crib) with no pillows or other unsafe sleep items or conditions.

Critical Safety Information

SPECIFIC SAFETY MESSAGING FOR CHILDREN'S PRODUCTS

Children's Sleepwear:

Children's sleepwear, including pajamas, night-gowns, and robes, from size 9 months to size 14, must pass flammability testing and have safety information pertaining to flammability as outlined in 16 CFR 1615 as outlined in 16 CFR 1615 and 1616.

CR recommends that platforms include the following on the product pages:

- The product listing online should include language that the sleepwear has passed the required testing and include images of any labeling required to be on the garments or packaging.
- The listing should indicate whether flame retardants have been added to the fabric and provide care instructions to avoid removing the added protection.
- The listing should include guidance to help the consumer buy the appropriate size for the child and understand the role of loose clothing in fires.

. For children's safety, garment should fit snugly. This garment is not flame resistant. Loose fitting garment is more likely to catch fire.

**WEAR SNUG-FITTING
NOT FLAME RESISTANT**

Examples: Safety information pertaining to flammability in children's sleepwear.

Critical Safety Information

SPECIFIC SAFETY MESSAGING FOR CHILDREN'S PRODUCTS

Dressers:

- For clothing storage unit listings, do not show items on top of the product that may entice a child to climb on it, such as toys, baby monitors, or remotes. That could lead to dresser tip-overs. Learn more about tip-over prevention at anchorit.gov or parentsagainsttipovers.org.
- Platforms should consider requiring anchoring information on product pages for TV stands, dressers, and all other furniture used for storage—including buffets—and shelving units.

Example: Dresser in child's room shown with toys on top that might entice a toddler to climb on the drawers.

Example: Dresser without any enticing objects on top that might encourage children to climb.

Critical Safety Information

SPECIFIC SAFETY MESSAGING FOR CHILDREN'S PRODUCTS

Corded Window Treatments:

- Ensure that any window treatments that are in any image used on a product page show cordless window treatments only. Window coverings with cords can lead to strangulation in under a minute, and showing only cordless window treatments in images can help to reinforce this important safety message. Learn more at cpsc.gov/gocordless or pfbws.org.

Example: Window blind shown with looped cord, posing a strangulation risk.

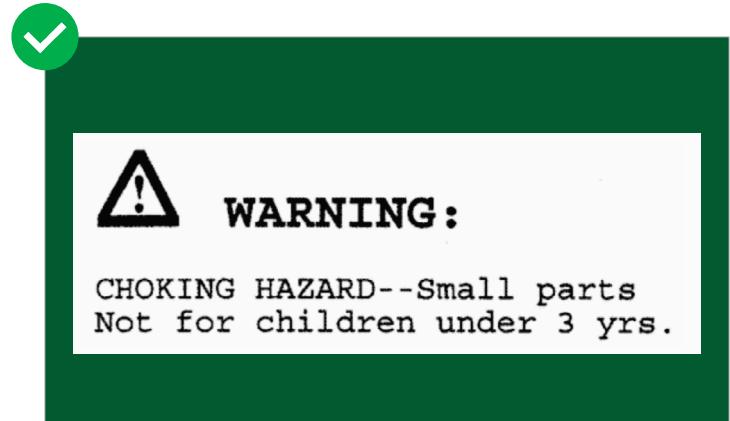

Example: Window shades with no cords, thereby eliminating the strangulation risk.

Critical Safety Information

SPECIFIC SAFETY MESSAGING FOR CHILDREN'S PRODUCTS

Small Parts and Supervision:

- For children's products containing small parts, platforms should not allow images of young children (3 and under) playing with them. Small balls and marbles also pose choking hazards and are not suitable for children younger than 3 years. The small parts warning must be visible on any advertisement where the product can be purchased, including online sales. The small parts warning is required on any page where products for children 4 to 7 are sold.
- If adult supervision is required for the product, require images that include an adult, whether they're playing with a child or in the room looking on.

Critical Safety Information

SPECIFIC SAFETY MESSAGING FOR CHILDREN'S PRODUCTS

Riding Equipment:

- Children should be wearing helmets correctly in images of bikes, scooters, or other riding toys.

Example: Image on product page for children's bike showing child without a helmet.

Example: Safe image showing child wearing a helmet while riding a bike. Photo: Louis Garneau

Features for a Safer Marketplace

84%
of consumers

believe digital marketplaces should be responsible for ensuring the safety of products sold on their platforms by third party sellers.

Source: Consumer Reports nationally representative American Experiences Survey of 2,191 U.S. adults (October 2025).

BROWSER VS. APP PARITY

The Why:

Because consumers shop for products using both browsers and apps, it is important that they are able to access the same product details regardless of how they shop in any given marketplace. This is especially important for critical product details and safety information and is necessary to make an informed purchasing decision.

The How:

Competition for digital real estate in an app environment can be fierce. Platforms should use their expertise to ensure that their application allows consumers access to much of the same information that they would be able to access on a desktop, including key safety features and information about specific products, seller information, and the platform's recalls page. Product teams should consider safety information a high priority when balancing the app and browser environments. The form of presenting safety information can adapt to the particular environment, but it should not be dropped for brevity.

Features for a Safer Marketplace

ACCESSIBLE AND SEARCHABLE DATABASE OF TESTING CERTIFICATIONS

The Why:

When purchasing children's products online, consumers should have access to the Children's Product Certificate ([CPC](#)) or third-party test reports. The CPC is a document required by the Consumer Product Safety Commission ([CPSC](#)) and certifies that the product complies with applicable safety rules. These documents are helpful to build confidence for discerning consumers, as well as give advocates, media, and influencers the ability to do additional research when making recommendations to consumers.

Because platforms can collect CPCs, they should create an online database for consumers to access and search for products they are considering purchasing. The platform could then work to integrate this information and make it easier for sellers to include links to the database on their seller page and to the specific CPC on the product page.

Products other than children's products that are required to meet CPSC safety standards can provide a General Certificate of Conformity ([GCC](#)), which can also be included in the database.

The How:

This database should be easily accessible from multiple points on the website. **At a minimum, it should be linked from the platform's safety page as well as in a menu on the landing page.** The database should also ensure that the consumer can easily download a copy of the CPC to keep for their records. Platforms should also provide consumers the option to easily query the platform for a specific product by using product-specific information, such as its full listing name or platform-specific product number (like ASIN). Consumers should also have the ability to provide feedback if they discover an issue with the certificate (e.g., the certificate is for a different product or it shows test failures).

Features for a Safer Marketplace

86%
of consumers

say platforms should thoroughly vet sellers **before they are allowed to sell on a site** including steps like verifying seller identity, history, and compliance with safety rules.

Source: Consumer Reports nationally representative American Experiences Survey of 2,191 U.S. adults (October 2025).

SELLERS SHOULD BE DIRECTLY SEARCHABLE

The Why:

Consumers should not have to scour customer reviews to learn more about the seller, or about the product. The consumer should be able to easily know whether the seller has a poor response time or whether many of its products have been the subject of consumer complaints or have been recalled. **As such, platforms should ensure that easy-to-understand information about any given seller is included throughout the marketplace.** This includes an easy-to-find and easy-to-understand rating or score that reflects the seller's reputation and safety record. Platforms should also consider creating the ability for consumers to find third-party sellers and their contact information more easily. This would allow consumers to better interact with the third-party seller and resolve any issues or concerns that may arise.

The How:

Sellers should be easily accessible from the marketplace's home page, at a minimum, as well as be easily searchable by product type, name, or rating. Providing this capability would allow consumers to search for and find seller information without first navigating to a specific product page, to find sellers for items that were gifts, and to return to sellers with whom they've had a positive experience. In addition, consumers should be able to quickly and seamlessly download or access the seller's contact information. Consumers should also have the ability to provide feedback if they discover an issue with a seller's entry (e.g., the seller's contact information is unavailable or invalid).

Features for a Safer Marketplace

SELLER SCORE/REPUTATION

The Why:

Similar to having access to product ratings and reviews, consumers should also have the ability to see a seller's ratings or scores that reflect the seller's overall trustworthiness and safety record.

The How:

The seller's score/rating should be available to consumers on the seller's product pages and its individual storefront pages. The platform should use factors such as responsiveness, any history of recalls, and customer satisfaction or ratings to formulate a score that is useful for consumers when making their purchasing decisions.

SELLER SELECTION

The Why:

Consumers should trust that the sellers on a platform have undergone a thorough vetting process. When customers shop in a physical store, they can trust that the retailer has done its due diligence on the sellers before products make it to the shelves. Consumers may assume that similar rigor is applied to digital platforms and should have a clear understanding of the criteria used to select sellers on the platform and how sellers are promoted when multiple parties sell the same product.

The How:

This information should be a public document easily found through a simple search or as a policy in the platform's About Us, Frequently Asked Questions, or similar section. Platforms should provide consumers with information on how they accept third-party sellers to sell on their marketplaces. Platforms should also include factors that could lead to the termination of the seller's account. Such information and factors could include sales history, complaints, and responsiveness to consumer needs or concerns. Access to these policies can help consumers better understand and trust the platform's ability to weed out bad actors and allow only trustworthy sellers onto its platform, as well as how platforms choose and recommend sellers.

Features for a Safer Marketplace

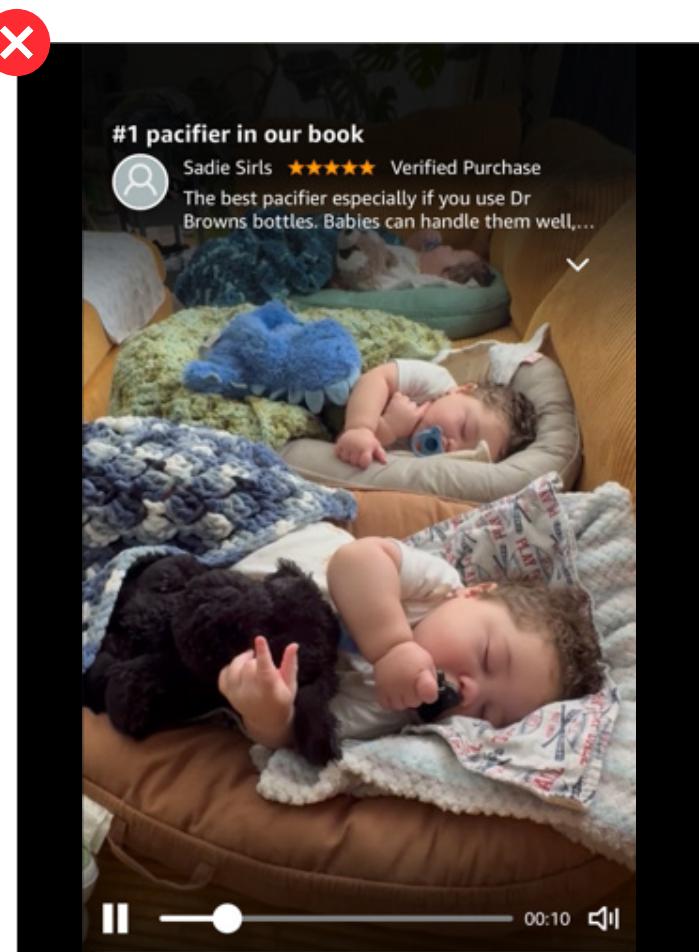

USER-GENERATED REVIEWS

The Why:

Consumers often rely on the experiences of others to inform their own purchasing decisions for products. As such, customer reviews are prominently featured on product pages and can include images of the product in real-world settings, which may inform the product's potential uses, or even design ideas. Unfortunately, some of these user-generated images have the potential to showcase unsafe practices and scenarios that could put the consumer or their family at risk of harm. **Platforms should closely monitor user-submitted images of their products and remove images depicting unsafe practices.**

The How:

Digital platforms should use their technological resources, such as image segmentation, to actively detect, review, and address user-submitted images or videos that depict unsafe product use. Platform models for reviewing user-generated content should be trained with important applicable safety information, such as safe sleep practices and furniture anchoring. In addition, platforms should clearly communicate to the consumer that, while user-provided content may depict unsafe practices, the platform discourages such use and encourages consumers to follow all appropriate safety guidelines. These disclaimers should be prominently displayed and make it clear in no uncertain terms that any images appearing in user reviews are not safety-tested or approved.

Example: An unsafe sleep environment found in a user review.

Features for a Safer Marketplace

BANNED/PROHIBITED AND RESTRICTED PRODUCTS LISTS

The Why:

Consumers should have access to a comprehensive list of products that sellers are not allowed to sell on the platform, as well as any product categories whose sales are restricted. These lists should be easily accessible and understandable by the consumer. The language should be clear and linked to all relevant recall notices or official warnings. Platforms should also provide clear explanations for a product ban or restriction and make them accessible for consumers.

The How:

This comprehensive list should be a separate page that is publicly available for all to review. Consumers should be able to search easily for this information, and even have a link available from the home page. Moreover, if a consumer searches for a product that is banned, they should be directed to safety information about the product category and relevant platform policies to learn the important safety information.

The screenshot shows the 'Hazardous and prohibited items' page on the Amazon Seller Central website. The page title is 'Hazardous and prohibited items'. It includes a sidebar with 'Related articles' for categories like Alcohol, Animals and animal-related products, Art - Fine Art, and many others. The main content area has sections for 'Examples of permitted hazardous listings' and 'Examples of prohibited listings', each with a list of items and notes about sales restrictions or prohibited sale through Fulfillment by Amazon. The page also includes a note about shipping requirements and a list of prohibited products containing Methylene Chloride.

Example: [Amazon Seller Central](#)

Features for a Safer Marketplace

PLATFORM ENDORSEMENTS

The Why:

Many platforms include phrases or labels in search results and product listings that suggest the product has been vetted, but the criteria for the label are not always apparent. Consumers should be able to easily understand how the platform highlights specific product listings or sellers in its marketplace at the point the label is used.

Amazon's Choice

Amazon's Choice

Products highlighted as Amazon's Choice are highly rated, well-priced and available to ship immediately.

Example: Amazon's Choice explanation on a product page.

The screenshot shows a FAQ page for 'Amazon's Choice'. The top navigation bar includes 'Amazon's Choice' and 'Frequently Asked Questions'. The first question is '1. What is Amazon's Choice?' followed by a detailed description. The second question is '2. What does Amazon consider when highlighting a product as Amazon's Choice?' with a note about third-party sellers. The third question is '3. Can products sold by third-party sellers be highlighted as Amazon's Choice?' with a note about payment. The fourth question is '4. Can brands or selling partners pay to have their products highlighted as Amazon's Choice?' with a note about restrictions.

Example: [Amazon's Choice FAQ page](#)

The How:

Platforms should deploy easy-to-use, in-page pop-ups or links to pages that explain to consumers in plain language how their endorsements or labels, such as "Amazon's Choice," Walmart's "Pro Seller," Target's "Best-seller," or Temu's "Best Seller," are determined. These should be available in all versions of the marketplace app and mobile and desktop browsers.

Bestseller in Cribs

Based on sales and guest views of this item within the last 30 days.

Example: Target's Bestseller for a particular product.

Highly rated

Based on average star rating, number of ratings and reviews (including incentivized), and verified purchases.

Example: Target's Bestseller for a particular product.

Best Seller

Best Seller means that this product has ranked among the top-selling products in its product category over the past 14 days.

The products are ranked within each category using a combination of factors including sales and the number of buyers.

OK

Example: Temu's Best Seller.

Recalls

When a product hazard is discovered that puts the health and safety of consumers at risk, **it is essential that digital marketplaces offer a clear, transparent, and timely recall process that makes it easy for the consumer to participate.** To this end, platforms should establish specific guidelines for their marketplaces and for their sellers on how they can best respond to these hazards and the expectations for when to recall a product, and can be thought of in terms of time, process, incentive, and transparency.

TIME

In the unfortunate event that a recall is necessary, it is important for the process to be as quick as possible.

- Once a product is discovered to be hazardous, platforms should have processes in place with their sellers to ensure that recalls are initiated as soon as it is feasible.
- When a recall is announced, platforms should contact consumers and make them aware of the recall as soon as the announcement is public.
- Notices and reminders should be sent to consumers on a regular basis. Consumer notifications should not be limited to the initial announcement.
- With all other aspects of the digital platform, we strongly recommend that platforms experiment and continuously improve their timing and communications to optimize consumer recall participation.

86%
of consumers
think online marketplaces
should contact consumers if a
product is found to be unsafe and
68% believe the platform should
provide a refund, replacement or
repair.

Source: Consumer Reports nationally representative American Experiences Survey of 2,191 U.S. adults (October 2025).

PROCESS

All reasonable steps must be taken to reduce strain on the consumer in the event of a recall and make the process as seamless as possible.

- Technology and automated processes should be utilized to limit the actions that consumers must take to receive their remedy and be made whole.
- Refunds should be automatically initiated and applied to all affected consumers.
- Multiple methods of communication (e.g., email, text, app notifications) increase the likelihood that the consumer receives the message.
- Any action that is required on the part of the consumer needs to be clearly communicated and include easy-to-follow instructions.

Recalls

INCENTIVE

In order to facilitate consumer participation and awareness of the recall process, consumers should be incentivized in an appealing manner.

- Platforms should strongly encourage their third-party sellers to offer consumers full refunds as an option. If the third-party refuses to, the platform should consider offering a full refund to the consumer because it is essential for any recalled product to be removed from the home.
- Except for a few circumstances, CR discourages offering only repairs for recalled products and recommends that platforms discourage their sellers from offering repairs as well.
- Consumers should not be required to submit burdensome proof or perform burdensome tasks, such as mailing parts of the recalled product to prove that it has been destroyed.

Recalls

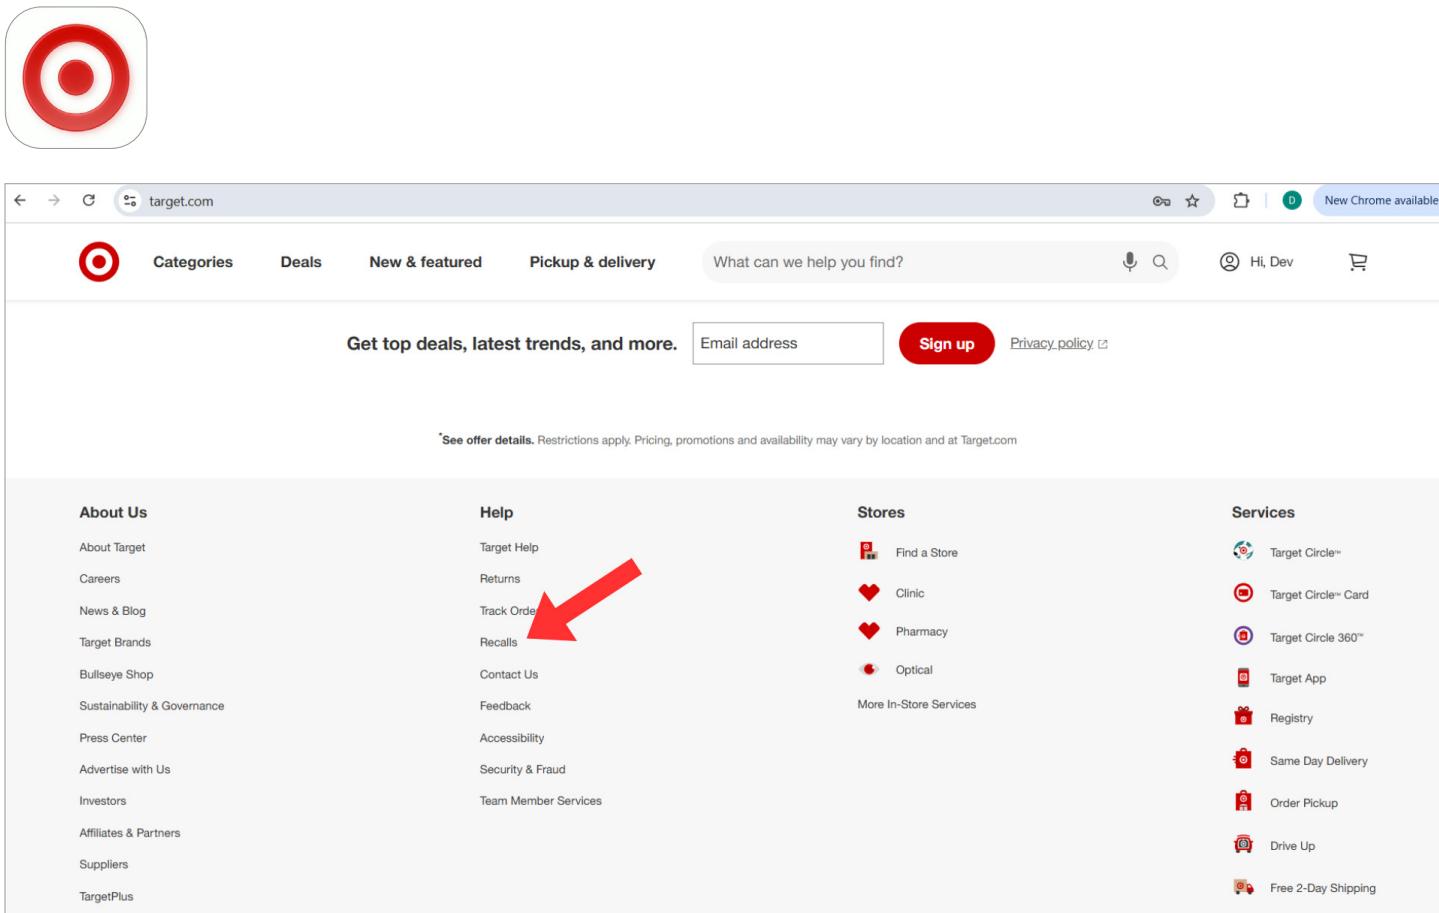

TRANSPARENCY

When a product on a platform has been recalled, it should be promptly removed from its marketplace and listed on its recall page. **A list of recalled products must be easy to find and accessible to consumers using the platform.** To this end, digital marketplaces should design their platform in such a way that consumers can find and access the pertinent information with little effort. This page should also be updated when the recall notice is published, on the same day of the recall announcement. The formatting of the

titles of recalls can change and become confusing for some recalls. They should be checked regularly and updated as needed.

In addition, if a company refuses to recall a product or the CPSC is unable to contact the company, the agency will issue a product safety warning. Platforms should also ensure that this warning information is clearly communicated and easily accessible to consumers.

- The recall page should be linked from a menu on the home page.

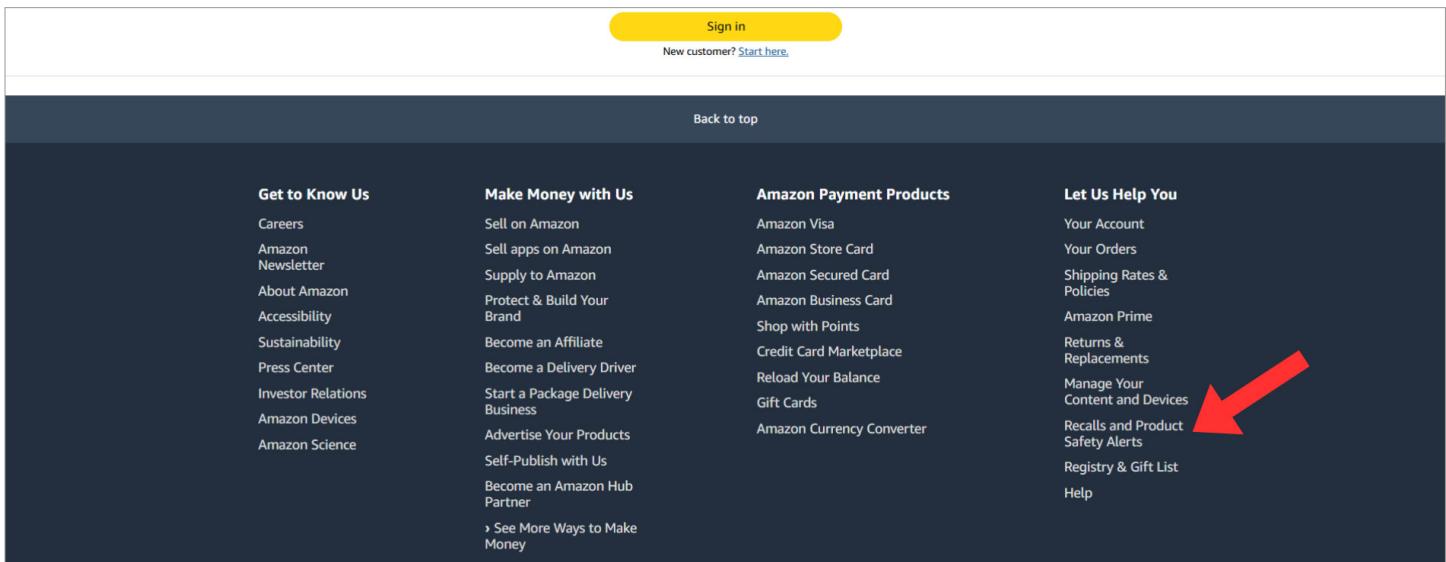

The screenshot shows the Target.com homepage. A red arrow points to the 'Recalls' link under the 'Help' menu. The 'Help' menu also includes links for Target Help, Returns, Track Order, Contact Us, Feedback, Accessibility, Security & Fraud, and Team Member Services. The 'About Us' menu on the left includes links for About Target, Careers, News & Blog, Target Brands, Bullseye Shop, Sustainability & Governance, Press Center, Advertise with Us, Investors, Affiliates & Partners, Suppliers, and TargetPlus. The 'Stores' menu includes links for Find a Store, Clinic, Pharmacy, Optical, and More In-Store Services. The 'Services' menu includes links for Target Circle, Target Circle Card, Target Circle 360, Target App, Registry, Same Day Delivery, Order Pickup, Drive Up, and Free 2-Day Shipping. A search bar and a sign-up button are also visible at the top of the page.

Example: target.com

Recalls

TRANSPARENCY

- The link should include the words “product safety” and “recalls.” That way, platforms can also add safety warnings released by any public health or safety agency.

The screenshot shows the footer of the Amazon website. At the top, there is a yellow "Sign in" button and a link for "New customer? Start here.". Below that is a dark blue footer bar with a "Back to top" link. The footer is divided into four sections: "Get to Know Us", "Make Money with Us", "Amazon Payment Products", and "Let Us Help You". The "Let Us Help You" section includes links for "Your Account", "Your Orders", "Shipping Rates & Policies", "Amazon Prime", "Returns & Replacements", "Manage Your Content and Devices", "Recalls and Product Safety Alerts" (which is highlighted with a red arrow), and "Registry & Gift List".

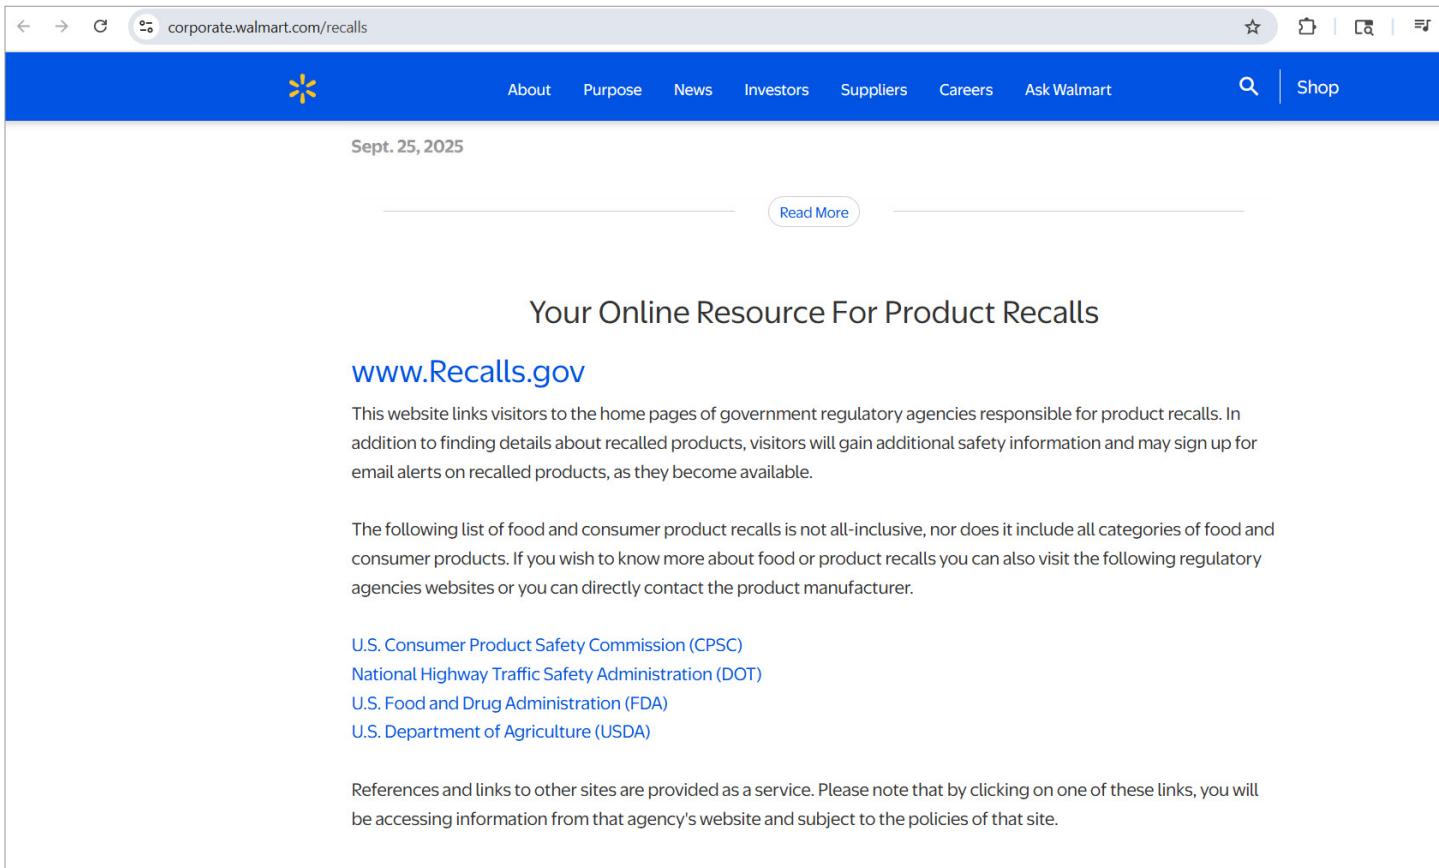

Example: amazon.com

Recalls

TRANSPARENCY

- Separate from individual recall listings, the page should contain links to the recall pages of each government agency—CPSC, FDA, NHTSA, USDA—which include recalls

of products sold on the website. The platform can also use [Recalls.gov](https://www.Recalls.gov) to link to all recalls from the different agencies, but this adds additional steps.

A screenshot of a web browser showing the Walmart Recalls page. The URL in the address bar is "corporate.walmart.com/recalls". The page has a blue header with the Walmart logo and navigation links for About, Purpose, News, Investors, Suppliers, Careers, Ask Walmart, a search bar, and a "Shop" button. Below the header, the date "Sept. 25, 2025" is displayed. A "Read More" button is visible. The main content area features the text "Your Online Resource For Product Recalls" and a link to "www.Recalls.gov". Below this, there is a section about the website's purpose, links to government agency websites for recalls, and a note about accessing information from agency websites. A small note at the bottom states: "References and links to other sites are provided as a service. Please note that by clicking on one of these links, you will be accessing information from that agency's website and subject to the policies of that site.".

Below the header, there is a search bar with the placeholder "search help" and a magnifying glass icon. On the left, there is a sidebar with "Browse Help" and a dropdown menu "choose a topic". Below the sidebar, there is a link "contact us". On the right, there is a section titled "Recent recalls" with a red arrow pointing towards the search bar.

Example: [Target Recall Help Page](#)

Recalls

SPECIFIC LISTING TITLES

The recall header should have the product's manufacturer, brand, name, and other identifying information. It should link to the recall notice from the recalling agency. Note: The CPSC's recall headlines already contain this information, but other agencies such as the FDA and NHTSA may not. See these examples from a platform's listing:

- [**Sensio Recalls Steam Espresso Machines Due to Burn and Laceration Hazards**](#) (CPSC) (Manufacturer, product name, hazard)
- [**Class 1 Device Recall Ballard**](#) (FDA) (Brand only)
- [**Child Seat May Allow Excessive Movement/ FMVSS 213**](#) (NHTSA) (Hazard and product type, no brand or model)

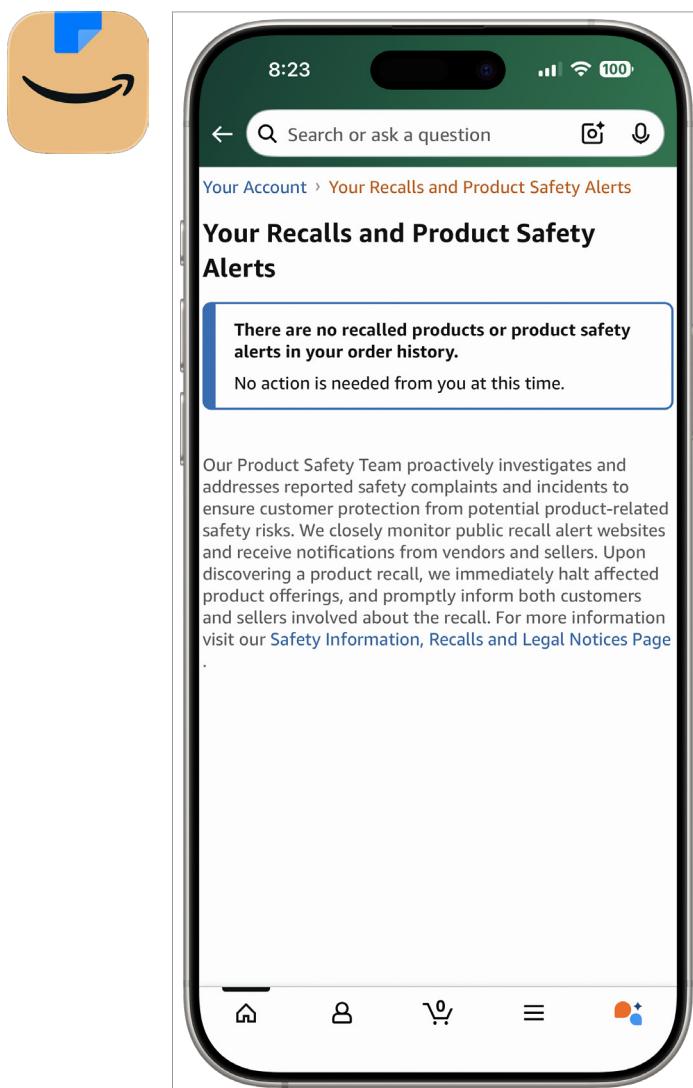

It is sufficient to list the information above and link to the full recall notice.

PERSONALIZED RECALL INFORMATION

The platform should include a page dedicated to providing the consumer with detailed and tailored information based on their individual purchase history within the platform. For instance, there should be a "My Recalls" or similar heading in the My Account or Customer Service/Support sections of the page that specifically displays any recalls that are immediately associated with prior purchases.

RECALLS ACROSS COUNTRIES

A product that is unsafe in one country is unsafe in other countries. Therefore, once a product is discovered to be hazardous or has put people at risk, or even injured or killed someone, it should be removed from the platform globally. Everyone who purchased the dangerous product in all countries should be informed about the potential risks and hazards associated with it, and the product should be removed from all sites.

Example: amazon.com/product-safety-alerts

Other Product Safety Resources

The following are key resources we strongly encourage platforms to link and refer to.

[American Academy of Pediatrics \(AAP\)](#)

[Healthy Children](#)

[Parents Against Tip-Overs \(PAT\)](#)

[Parents for Window Blind Safety \(PFWBS\)](#)

[Reese's Purpose \(preventing button- and coin-cell battery ingestion\)](#)

[Charlie's House \(preventing at-home child injuries\)](#)

[That Water Bead Lady \(helping families after product injury\)](#)

[Safe Infant Sleep](#)

Thank You
